The Terex Superlift 3800

The full size Terex Superlift 3800 crawler crane was introduced at Bauma 2013, and has a maximum capacity of 650 tonnes, allowing it to erect wind turbines up to 170 metre hub height. This 1:50 scale model by Conrad is painted in the colours of Franz **Bracht, the German heavy lifting and transport** specialist.

It comes with a 24 page colour manual, and the assembly is described with a series of staged photographs. Full assembly takes several hours. The model parts fit together very well with just the occasional removal of excess paint from some connection holes required.

The track frames on this version of the model are improved and narrower than previously. They look very good and roll well. There are four outriggers with jacks for lifting the base crane - carbody and superstructure - off of a transport

The crane superstructure and cab are nicely decorated with Bracht graphics which are very sharp. The metal boom and jib sections are heavy, very strong and robust. Geometrically perfect, they fit together extremely well. Mesh walkways can be fitted as can a safety line system which has a realistic fine steel cable.

All of the sheaves are high quality metal, although the pendant bars are strong, robust plastic. However the colour match with the metal parts is a little variable and they do not represent the true detail of the real crane's pendants.

All three hoist drums are operated using keys which push through holes in the crane superstructure,

they also have a slotted end so that they can be driven using a powered screwdriver. The three hoist drums mounted in the boom and derrick sections are operated similarly so that all the functions of the real crane can be replicated. The boom hoists are pinned in position and are removable. The hook is modular and mainly metal.

The suspended ballast frame is attached to the crane horizontally with two working winch lines. The height is controlled by two hydraulic cylinders which are operated by rotating the jackets which unscrew the pistons and it works very well.

This a very well made and strong model. It is a fully flexible with many configurations possible, including just using the major components as transport loads. Overall this is another impressive heavy crawler crane model from Conrad. It costs around £500 from dealers.
